The Radford American Homes

This book contains the perspective view and floor plans of 100 low and medium priced houses, and is a continuation of the work which was begun in THE RADFORD IDEAL HOMES and which met with such phenomenal success all over the world. In this work, even greater care has been exercised in the selection of original, practical and attractive house designs, such as seventy-five to ninety per cent. of the people to-day wish to build. In the drawing of these plans special effort has been made to provide for the most economical constructions, thereby giving the home builder and the contractor the benefit of the saving of many dollars; for in no case have we put any useless expense upon the building, simply to carry out some pet idea. Every plan illustrated will show by the complete working plans and specifications that we give you designs that will work out to the best advantage and will give you the most for your money; besides, every bit of space has been utilized to the best advantage.

This book, as well as all others published by this company, has for its foundation the best equipped architectural establishment ever maintained for the purpose of furnishing the public with complete working plans and specifications at the remarkably low price of only \$5.00 per set. Every plan is designed by a licensed architect who stands at the head of his profession in this particular class of work.

The Radford Houses are now being erected in every country of the world where frame houses are built, which bespeaks for our plans more than anything we can say.

What We Give You

The first question you will ask is, "What do we get in these complete working plans and specifications? Of what do they consist? Are they the cheap, printed plans on tissue paper without details or specifications?"

We do not blame you for wishing to know what you will get for your money. The plans we send out are the regular blue-printed plans drawn one-quarter inch scale to the foot, showing all the elevations, floor plans and necessary interior details. We use the very best quality heavy Gallia Blue Print Paper, number 1000-X, using great care in the blue-printing to have every line and figure perfect and distinct.

What We Furnish in Blue Prints

Foundation and Cellar Plan

This sheet shows the shape and size of all walls, piers, footings, posts, etc., and of what materials they are constructed; shows the location of all windows, doors, chimneys, ash pits, partitions and the like. The different wall sections are given showing their construction and measurements from all the different points.

Floor Plans

These plans show the shape and size of all rooms, halls and closets; the location and size of all doors and windows; the position of all plumbing fixtures, gas lights, registers, pantry work, etc., and all the measurements that are necessary are given.

Elevations

A front, right, left and rear elevation are furnished with all the plans. These drawings are complete and accurate in every respect. They show the shape, size and location of all doors and windows, porches, cornices, towers, bays and the like, and, in fact, give you an exact scale picture of the house as it should be at completion. Full wall sections are given showing the construction from foundation to roof, the height of stories between the joists, height of plates, pitch of roof, etc.

Roof Plan

This plan is furnished where the roof construction is at all intricate. It shows the location of all hips, valleys, ridges, decks, etc.

All the above drawings are made to scale one-quarter inch to the foot.

Details

All necessary details of the interior work, such as door and window casings and trim, base, stools, picture moulding, doors, newel posts, balusters, rail, etc., accompany each set of plans. Part is shown in full size, while some of the larger work, such as stair construction, is drawn to a scale of one and one-half inch to the foot.

These blue prints are substantially and artistically bound in cloth and heavy waterproof paper, making a handsome and durable covering and protection for the plans.

Specifications

The specifications are typewritten on Lakeside Bond Linen Paper and are bound in the same artistic manner as the plans, the same cloth and waterproof paper being used. They consist of from about sixteen to twenty pages of closely typewritten matter, giving full instructions for carrying out the work. All directions necessary are given in the clearest and most explicit manner so that there can be no possibility of a misunderstanding.

Basis of Contract

These working plans and specifications can be made the basis of contract between the home builder and the contractor.

They will prevent mistakes which cost money, and they will prevent disputes which are unforeseen and never settled satisfactorily to both parties. When no plans are used, the contractor is often obliged to do some work which he did not figure on, and the home builder often does not get as much for his money as he expected, simply because there was no basis on which to work and upon which to base the contract.

No misunderstandings can arise when a set of our plans and specifications are before the contractor and the home builder, showing the interior and exterior construction of the house as agreed upon in the contract. Many advantages may be claimed for the complete working plans and specifications. They are time savers, and therefore money savers. Workmen will not have to wait for instructions when a set of plans is left on the job. They will prevent mistakes in cutting lumber, in placing door and window frames, and in many other places when the contractor is not on the work and the men have received only partial or indefinite instructions. They also give instructions for the working of all material to the best advantage.

Free Plans for Insurance Adjust- ment

You take every precaution to have your house covered by insurance, but do you make any provision for the adjustment of the loss should you have a fire?

There is not one man in ten thousand who will provide for this embarrassing situation. You can call to mind instances in your own locality where settlements have been delayed because the insurance companies wanted some proof which could not be furnished. They demand proof of loss before paying insurance money, and they are entitled to it. We have provided for this and have inaugurated the following plan, which cannot but meet with favor by whoever builds a house from our plans:

Immediately upon receipt of information from you that your house has been destroyed by fire, either totally or partially, we will forward you, free of cost, a duplicate set of plans and specifications, and in addition we will furnish an affidavit giving the number of the design and the date when furnished, to be used for the adjustment of the insurance.

Without one cent of cost to you and without one particle of trouble, we keep a record of the number of the house design and the date it was furnished, so that, in time of loss, all it will be necessary for you to do is to drop us a line and we will furnish the only reliable method of getting a speedy and satisfactory adjustment. This may be the means of saving you hundreds of dollars besides much time and worry.

Our Liberal Prices

Many have marveled at our ability to furnish such excellent and complete working plans and specifications at such low prices. We do not wonder at this, because we charge but five dollars for a more complete set of working plans and specifications than you would receive if ordered in the regular manner, and when drawn especially for you, at a cost of from fifty to seventy-five dollars. On account of our large business and unusual equipment, and owing to the fact that we divide the expense of these plans among so many, it is possible for us to sell them at these low prices. The margin of profit is very close, but it enables us to sell thousands of sets of plans, which save many times their cost to both the owner and the contractor in erecting even the smallest dwelling.

Our Reliability

Our reliability is beyond question. We have been in the business for many years, having grown from a small institution to our present large capacity, publishing many books and furnishing plans and specifications for many thousands of houses in all parts of the United States, Canada, Europe, Australia, and South Africa. We presume this book may fall into the hands of some one who does not know us; therefore, if you have never heard of us and are not familiar with our reliability and business methods, inquire of your lumber dealer or banker. This article is unnecessary to those who have had previous dealings with us. If you are afraid to send the money direct to us, send it with your order to The Federal Trust and Savings Bank, of Chicago, Ill. (capital and surplus, \$2,500,000), or to the Riverside State Bank of Riverside, Ill., with instructions not to turn it over to us unless they know we are perfectly reliable and will do as we agree.

We have built up our business on these lines. We have merited a continuance of patronage from our customers. We have received the benefit of their words of commendation to their friends. We always do exactly as we agree.

Our Guarantee

Perhaps there are many who feel that they are running some risk in ordering plans at a distance. We wish to assure our customers that there is no risk whatever. If, upon receipt of plans, you do not find them exactly as we represent them, if you do not find them complete and accurate in every respect, if you do not find them as well prepared as those furnished by any architect in the United States, or any that you have ever seen, we will refund your money upon the return of the plans from you in perfect condition.

All of our plans are prepared by licensed architects standing at the head of their profession, and the standard of their work is the very highest.

We could not afford to make this guarantee if we were not positive that we were furnishing the best plans put out in this country, even though our price is not more than one-seventh to one-tenth of the price usually charged.

Lumber Bill

We do not furnish a lumber bill. We state this here particularly, as some people have an idea that a lumber bill should accompany each set of plans and specifications. In the first

place, our plans are gotten up in a very comprehensive manner, so that any carpenter can easily take off the lumber bill without any difficulty. We realize that there are hardly two sections of the country where exactly the same kinds of materials are used, and, moreover, a lumber bill which we might furnish would not be applicable in all sections of the country. We furnish plans and specifications for houses which are built as far north as the Hudson Bay and as far south as the Gulf of Mexico. They are built upon the Atlantic and Pacific coasts, and you can also find them in Australia and South Africa. Each country and section of a country has its peculiarities as to sizes and qualities; therefore it would be useless for us to make a list that would not be universal. Our houses when completed may look the same, whether they are built in Canada or in Florida, but the same materials will not be used, for the reason that the customs of the people and the climatic conditions will dictate the kind and amount of materials to be used in their construction.

Estimated Cost

It is impossible for any one to estimate the cost of a building and have the figures hold good in all sections of the country. We do not claim to be able to do it. The estimated cost of the houses we illustrate is based on the most favorable conditions in all respects, and does not include plumbing and heating. We do not know your local conditions, and, should we claim to know the exact cost of a building in your locality, a child would know that our statement was false. We advise consultation with your local responsible material dealers and reliable contractors, for they, and they alone, know your local conditions. We wish to be frank with you, and therefore make no statement that we cannot substantiate in every respect. If any plan in this book, or in any other book we publish, pleases you; if the arrangement of the rooms is satisfactory, and if the exterior is pleasing and attractive, then we make this claim—that it can be built as cheaply as if any other architect designed it, and we believe cheaper. We have studied economy in construction, and our knowledge of all the material that goes into the house qualifies us to give you the best for your money. We give you a plan that pleases you, one that is attractive, and one where every foot of space is utilized at the least possible cost. Can any architect do more, even at seven to ten times the price we charge you for plans.

Reversing Plans

We receive many requests from our patrons for plans exactly according to the designs illustrated, with the one exception of having them reversed or faced in the opposite direction. It is impossible for us to make this change and draw new plans, except at a cost of about eight times our regular prices. We see no reason why our regular plans will not answer your purpose. Your carpenter can face the house exactly as you wish it, and the plans will work out as well facing in one direction as in another. We can, however, if you wish, and so instruct us, make you a reversed blue print and furnish it at our regular price, but in that case all the figures and letters will be reversed, and therefore liable to cause as much confusion as if your carpenter re-

versed the plan himself while constructing the house. We would advise, however, in all cases where the plan is to be reversed and there is the least doubt about the contractor not being able to work from the plans as we have them, that two sets of blue prints be purchased, one regular and the other reversed, and in such cases we will furnish two sets of blue prints and one set of specifications for only fifty per cent. added to our regular cost, making the \$5.00 plan cost only \$7.50.

Special Department

We have established a special department under the supervision of a licensed architect, to handle all special plans which our patrons may like to have drawn. We realize that often some special or original idea is wished carried out, and to provide for this we have our architects and draughtsmen. The price we charge is very reasonable. Should you wish the services of this department, it would be necessary for you to send us as full and complete information as possible, accompanied by a rough sketch illustrating as near as you can your ideas and requirements. Immediately upon receipt of this information from you, we will make you a price on these plans and specifications carrying out your own ideas, and if our price proves to be satisfactory, we will submit pencil sketch subject to your corrections and additions before proceeding to complete the plans. We must, however, have an understanding that we are under contract to do this work, for we cannot afford to do all the preliminary work without some guarantee that it will be accepted after we have agreed to make the plans entirely satisfactory to you. We will, however, make estimate on the cost of any special work, so that you will know exactly what it will cost you before we proceed with the plans.

How to Send Money

Remittances can be made by Post Office Money Order, Express Money Order, Bank Draft, United States or Canadian Bills. Take great care to write your address plainly, and be sure and write your name and address on the upper left-hand corner of the envelope. In addition, write plainly in your letter your name and address, the name of your city, county and State, if you are a resident of the United States, or if a resident of any other country, the name of the county, district or Province; also the street and number when necessary. We receive a great amount of money which it is impossible for us to trace on account of the incomplete or indistinct writing of name or address, and oftentimes the entire omission of both.

When designing our houses, we have kept in mind the fact that some day the owner may wish to get his money out of his home. We design only practical houses, out of which the owner can readily get his money.

Always have Plans on the job

Blue Printed Plans

On the opposite page we illustrate an exact photographic reproduction of a set of our Blue Prints, bound in cloth and waterproof paper ready for use. We use only the finest heavy blue print paper. We take every precaution to have each line perfect and distinct. We furnish the front, two side and rear elevations, cellar, foundation and all floor plans, besides all the necessary interior details. These Plans are all drawn to a scale of one-quarter inch to the foot. **Read carefully pages 4 and 5, and see "What We Give You."**

They keep the men at work

When designing our houses, we have kept in mind the fact that some day the owner may wish to get his money out of his home. We design only practical houses, out of which the owner can readily get his money.

Our Special Department will work out

Special Department

In our Special Department, which is under the supervision of a licensed architect, we can handle all kinds of architectural work. If there is no plan in this book which entirely meets with your requirements, we will draw plans especially for you, incorporating all of your own original ideas and making the house entirely according to your requirements. We have a corps of draughtsmen and are able to get out your work in the quickest possible time. In this book we illustrate only low and medium priced houses. In our Special Department we handle the finest work in addition to that of low and medium price.

The large amount of work we do and the experience we have received qualify us to give you the best work and most artistic designs.

your own original ideas

In our Special Department we design elaborate residences as well as low and medium priced work.

“I did not figure on that,” says the

We have received many letters asking us how it is possible for us to sell such excellent and complete plans at such low prices. If we sold but one set, we could not sell so cheaply. The number we sell makes it possible.

We furnish duplicate plans free of cost

Free Plans for Insurance Adjustment

Immediately upon receipt of information from you that the house built from our plans has been destroyed by fire, we agree to forward to you, free of cost, a duplicate set of plans and specifications to be used in the adjustment of the insurance. We will also furnish you with an affidavit giving the date we furnished the plans and the number of the design.

Your policy contract will state specifically that the Insurance Company may require you to furnish verified plans and specifications of your house in case of fire loss. We ask you to verify our statement by referring to your insurance policies or by interviewing your local Insurance Agent.

You take every precaution to have your house covered by insurance, but entirely neglect to make any provision for the adjustment of the loss should you have a fire. Without one penny of expense, or one particle of trouble, we keep a record of your purchase, so that in time of loss, when your original plans will also be destroyed, we can furnish the only reliable method of getting a speedy and satisfactory settlement. It may be the means of saving you hundreds of dollars besides a great deal of time and worry.

for fire insurance adjustment

Your policy contract will state that in case of a fire, the Insurance Company may require you to furnish a verified set of plans and specifications of your house before paying over your insurance money. We furnish duplicate plans, free of cost, for fire insurance adjustment.

When designing our houses, we have kept in mind the fact that some day the owner may wish to get his money out of his home. We design only practical houses, out of which the owner can readily get his money.

Let us co-operate with you

Special Farm Building Department

We are prepared to furnish plans and specifications of up-to-date farm buildings for the improvement of new or old farms. We are so equipped that we can furnish special plans of Hay Barns, Horse Barns, C w Barns, Large Poultry Houses, Silos, Granaries, Implement Houses, Dairies, Creameries, or any other buildings which may be required on a farm. We draw these plans especially to order, carrying out the original ideas of the farmer.

We do not, at this time, publish a book of farm building plans, and make them up only to order. Let us co-operate with you before making improvements on your farm. We will guarantee perfect satisfaction.

before making improvements on your farm

⅞ x 2½ x 4 D. & H. Pickets.....	1,800
2-inch O. G. Battens.....	500
2½-inch O. G. Battens.....	600
3-inch O. G. Battens.....	700

Estimated Weights of Hardwood Lumber

1 inch, Rough

	LBS. PER M FEET.	
	DRY.	GREEN.
Black Ash	3,250	4,500
White Ash	3,500	4,500
Beech	4,000	6,000
Basswood	2,400	4,000
Birch	4,000	5,500
Butternut	2,500	4,000
Cherry	3,800	5,000
Chestnut	2,800	5,000
Cottonwood	2,800	4,500
Rock Elm	4,000	5,500
Soft Elm	3,000	4,500
Gum	3,300	5,500
Hickory	4,500	6,000
Mahogany, Cuban	4,000	5,500
Mahogany, Mexican	3,400	4,400
Maple	4,000	5,500
Oak	4,000	5,500
Poplar	2,800	3,800
Sycamore	3,000	4,750
Walnut	3,800	4,800

The estimated weight of logs is one-half more than the estimated weight of the green lumber of the same kind of wood.

Nails Required in Carpenter Work

To case and hang door, 1 pound.

To case and hang one window, $\frac{1}{4}$ pound.

Base, 100 lineal feet, 1 pound.

To put on rafters, joists, etc., 3 pounds to 1,000 feet.

To put up studding, 3 pounds to 1,000 feet.

To lap a 6-inch pine floor, 15 pounds to 1,000 feet.

Number of Nails to the Pound

SIZE	No. Per Lb.
6 penny fence, 2 inches	80
8 penny fence, 2½ inches	50
10 penny fence, 3 inches	34
12 penny fence, 3¼ inches	39
3 penny fine, 1½ inches	760
3 penny, 1¼ inches	480
4 penny, 1½ inches	300
5 penny, 1 inch	200
6 penny, 2 inches	160
7 penny, 2¼ inches	128

SIZE	No. Per Lb.
8 penny, 2½ inches	92
9 penny, 2 inches	72
10 penny, 3 inches	60
12 penny, 3¼ inches	44
16 penny, 3½ inches	32
20 penny, 4 inches	24
30 penny, 4¼ inches	18
40 penny, 5 inches	14
50 penny, 5½ inches	12

To Find the Number of Shingles Required for a Roof

Multiply the length of the ridge pole by twice the length of one rafter. If the shingles are to be exposed $4\frac{1}{2}$ inches to the weather, multiply by 9; if 5 inches to the weather, multiply by 8, which gives you the number of shingles needed.

Shingles are packed in bundles of 250 each; 900 shingles, laid 4 inches to the weather, will cover 100 square feet of roof; 800 shingles, laid $4\frac{1}{2}$ inches to the weather, will cover 100 square feet. Five pounds of shingle nails will fasten them on.

The weight of 1,000 shingles is approximately 250 pounds.

To Find the Number of Lath Required for a Room

Find the number of square yards in the walls and ceiling and multiply by 16, the number estimated to a square yard. The result will be the number of lath necessary to cover the room.

Most lath are 4 feet long and $1\frac{1}{2}$ inches wide, and they are put up in bunches of 50. The weight of 1,000 pine lath is approximately 450 pounds.

At 16 lath to the square yard, 1,000 lath will cover 63 yards of surface, and 11 pounds of lath nails will nail them on.

Stone and Brick Work

A cord of stone (128 cubic feet), 3 bushels of lime (there are about $1\frac{1}{4}$ cubic feet in a bushel), and a cubic yard of sand will make 100 cubic feet of wall.

To find the number of cords of stone needed to build a foundation wall, multiply together the length, height and thickness in feet and divide by 156.

A cubic yard of sand is called a load.

Five hundred bricks make a load.

A bricklayer's hod will hold 20 bricks. An ordinary bricklayer can lay 1,500 bricks in a day of ten hours, where the joints are left rough; about 1,000 bricks a day when both faces are to be worked fair; and not more than 500 a day when carefully joined and faced with picked bricks of a uniform color.

Three-fourths of a cubic yard of sand and $1\frac{1}{4}$ barrels of cement will lay 100 feet of rubble stone.

Five-eighths of a cubic yard of sand and $1\frac{1}{8}$ barrels of lime will lay 1,000 bricks.

Five courses of bricks will make one foot in height.

How to Figure Plastering

Multiply the distance around the four sides of the room in feet by the height of the room in feet. Multiply the product by the price per square yard and divide this product by 9, because there are 9 square feet in a square yard. For the ceiling, multiply the length of the room by the width of the room in feet and then by the price per square yard, and divide by 9 as before. Add these two results and you have the entire cost of plastering the room.

To every barrel of lime estimate about $\frac{5}{8}$ of a cubic yard of good sand for plastering.

One-third of a barrel of stucco will hard finish 100 square yards of plastering.

Six bushels of lime, 40 cubic feet of sand and $1\frac{1}{2}$ bushels of hair will plaster 100 square yards with two coats of mortar.

In plastering, no deductions are made for openings, because it is considered that the extra work in finishing around them balances the material saved.

RULES FOR PAINTING

FOR 100 square yards of surface, three coats, there will be needed 100 pounds of lead and 16 gallons of linseed oil.

One coat will require 20 pounds of lead and 4 gallons of oil.

One gallon of priming color will cover 50 yards.

A pound of paint will cover about 4 yards the first coat and about 6 yards each additional coat.

A day's work on the outside of a building is about 100 yards for the first coat and 80 yards for second or third coats.

How to Mix Paints

In the list below, the color first named is invariably the principal ingredient, the others coming in the order of their importance.

Thus in making a drab color, white is the chief ingredient and should be put in the painting pot first, and the black is needed in the least quantity. It is better to have the base color rather thick and the other colors thin.

To make:

Buff—White, yellow ochre and red.

Chestnut—Red, black and yellow.

Chocolate—Raw umber, red and black.

Claret—Red, umber and black.

Copper—Red, yellow and black.

Dove—White, vermilion, blue and yellow.

Drab—White, yellow ochre, red and black.

Fawn—White, yellow and red.

Flesh—White, yellow ochre and vermilion.

Freestone—Red, black, yellow ochre and white.

French Gray—White, Prussian blue and lake.

RULES FOR PAINTING (Continued)

Gray—White lead and black.
Gold—White, stone ochre and red.
Green Pea—White and chrome green.
Lemon—White and chrome yellow.
Limestone—White, yellow ochre, black and red.
Olive—Yellow, blue, black and white.
Orange—Yellow and red.
Peach—White and vermilion.
Pearl—White, black and blue.
Pink—White, vermilion and lake.
Purple—Violet, with more red and white.
Rose—White and madder lake.
Sandstone—White, yellow ochre, black and red.
Snuff—Yellow and Vandyke brown.
Violet—Red, blue and white.

The exact proportions of each color may easily be determined by experimenting with a smaller quantity.

Hints for Painters

Use raw linseed oil, without turpentine or benzine, for the first or priming coat. A little Japan dryer will make it dry faster.

For the priming coat for white, use one-half white lead, one-half ochre, mixed with raw oil.

For the second coat use all white lead and add a little turpentine to the oil to bleach it. The third coat should be the same. Always use raw oil for outside work, as it is less liable to blister.

For inside work the colors should be mixed with one-fourth oil and three-fourths turpentine.

MEASURES

Lineal Measure

12	inches	equal	1 foot.
3	feet	“	1 yard.
$5\frac{1}{2}$	yards	“	1 rod, perch or pole.
40	rods	“	1 furlong.
8	furlongs	“	1 mile.

Other units of measure are:

5	feet	equal	1 pace.
$2\frac{1}{2}$	feet	“	1 military pace.
6	feet	“	1 fathom.
9	inches	“	1 span.
18	inches	“	1 cubit.
4	inches	“	1 hand (to measure horses).
21.8	inches	“	1 Bible cubit.

The surveyors' chain, or Gunter's chain, of 100 links, is 66 feet long.

The engineers' chain, of 100 links, is 100 feet long.

MEASURES (Continued)

Cloth Measure

$2\frac{1}{4}$ inches equal 1 nail.

4 nails “ 1 quarter.

4 quarters “ 1 yard.

The English ell is about 5 quarters and the Flemish ell about 3 quarters.

Apothecaries' Measure

60 minims equal 1 fluidrachm.

8 fluidrachms “ 1 fluidounce.

16 fluidounces “ 1 pint.

8 pints “ 1 gallon.

A gallon is 231 cubic inches.

Liquid or Wine Measure

4 gills equal 1 pint.

2 pints “ 1 quart.

4 quarts “ 1 gallon.

MEASURES (Continued)

Square Measure

144	square inches	equal	1 square foot.
9	square feet	"	1 square yard.
$30\frac{1}{4}$	square yards	"	1 square perch.
40	square perches	"	1 rood.
4	roods	"	1 acre.
640	acres	"	1 square mile.
36	square miles	"	1 township.

Measurement of Time

60 seconds	equal	1 minute.
60 minutes	"	1 hour.
24 hours	"	1 day.
7 days	"	1 week.
28 days	"	1 lunar month.
28, 29, 30 or 31 days	"	1 calendar month.
12 calendar months	"	1 year.
$365\frac{1}{4}$ days	"	1 Julian year.
365 days 5 hours 48 minutes 49 seconds	} "	1 solar year.
365 days 6 hours 9 minutes 12 seconds		
10 years	"	1 decade.
10 decades	"	1 century.

MEASURES (Continued)

Dry Measure

2 pints	equal	1 quart.
4 quarts	"	1 gallon.
2 gallons	"	1 peck.
4 pecks	"	1 bushel.
8 bushels	"	1 quarter.

A pottle is 2 quarts; a load of grain is 5 quarters, and a last 10 quarters.

Angular or Circular Measure

60 seconds	equal	1 minute.
60 minutes	"	1 degree.
90 degrees	"	1 quadrant.
4 quadrants	"	1 circle or circumference.

Cubic Measure

1728 cubic inches	equal	1 cubic foot.
27 cubic feet	"	1 cubic yard.

A cord of wood contains 128 cubic feet.

A standard bushel contains 2150.42 cubic inches.

MEASURES (Continued)

Measures of Length

FRENCH		BRITISH AND U. S.
1 metre	equal	39.37 inches, or 3.28083 feet, or 1.09361 yards

4 quarters or	{	"	1 hundred-weight.
100 pounds			
20 hundred-weight		"	1 ton.

In some countries 112 pounds is called a hundred-weight and 20 of these a ton.
The stone is 14 pounds.

Troy Weight

24 grains		equal	1 pennyweight.
20 pennyweights		"	1 ounce.
12 ounces		"	1 pound.

The goldsmiths divide the troy ounce into 24 carats of 4 grains each for gold and silver and 150 carats of 4 grains each for diamonds.

Apothecaries' Weight

20 grains		equal	1 scruple.
3 scruples		"	1 dram.
8 drams		"	1 ounce.
12 ounces		"	1 pound.

Modern Carpentry and Joinery

A PRACTICAL MANUAL

By FRED T. HODGSON, M.O., A.A., The well-known technical writer.
It is one of the best works ever turned out by him.

It is copiously illustrated with diagrams and figures showing the solution of many intricate problems in **Geometry, Roofing, Carpentry, Joinery and Stair Work**. The illustrations and descriptive matter are clear, simple, definite and easily understood. The work is divided into four parts, namely:

Carpenters' Geometry; Timber Framing and Carpentry; Joinery and Joiners' Work; and, lastly, Rules and Tables for Measuring and Estimating Woodwork Generally.

Price, postpaid, only \$1.00

PART FIRST

Carpenters' Geometry

This consists in defining and explaining the qualities of **Circles, Ellipses, Polygons**, and other geometrical figures the ordinary workmen may have to deal with. **Sixty-eight practical illustrations** are exhibited in this part.

PART SECOND

Timber Framing and Carpentry

Practical Examples: In this part the use of the **Steel Square** is shown, also roof, bridge, dome and other framing methods. There are in this department **over 78 illustrations and diagrams** showing how the work is done and how to do it.

Like all of Mr. Hodgson's works, it is written in a simple, every-day style, and does not bewilder the workman with long mathematical formulas or abstract theories.

It is the most complete and very latest work published, being thorough, practical and reliable. One which no carpenter can afford to be without. The work is printed from new, large type plates, on a superior quality of cream wove paper, durably bound in English cloth. Sent postpaid to any address upon receipt of price, only \$1.00.

PART THIRD

Joinery and Joiners' Work

Practical Illustrations: This part is largely illustrated with diagrams, showing how to lay out curved work, diminishing and raking mouldings, door and window frames, angle sashes, doors, dovetailing, stairs and stairways, covering solids, joining mouldings, cornices, finishings and many other things. **Nearly 100 illustrations** are embodied in this part.

PART FOURTH

Tables and Handy Rules

For estimating and measuring work of any kind. Short rules in Arithmetic and mensuration, and many other things useful to the operative workman.

PRACTICAL USES of the S T E E L S Q U A R E

Modern Treatise by Fred T. Hodgson. An exhaustive work including a brief history of the Square; a description of many of the Squares that are now, and have been in the market, including some very ingenious devices for laying out Bevels for Rafters, Braces and other inclined work; also chapters on the Square as a calculating machine, showing how to measure Solids, Surfaces and Distances — very useful to builders and estimators. Chapters on roofing and how to form them by the aid of the Square; Octagon, Hexagon, Hip and other Roofs are shown and explained, and the manner of getting the rafters and jacks given. Chapters on heavy timber framing, showing how the Square is used for laying out Mortises, Tenons, Shoulders, Angle Corners and similar work.

The work abounds with hundreds of fine illustrations and explanatory diagrams, which will prove a perfect mine of instruction for the mechanic, young or old.

Two large volumes, bound in fine cloth, printed on a superior quality of paper from new large type.

Price, 2 Volumes, Cloth Binding, \$2.00

Publishers' Note. We wish to state this work is entirely new and must not be mistaken for Mr. Hodgson's former works on the "Steel Square," which were published some twenty years ago. Be sure and get "Practical Uses of the Steel Square," by Fred T. Hodgson. Address all orders to

The Radford Ideal Homes

100
HOUSES
FOR
\$1.00

One Cent per House

Size of book 8 x 11 inches, bound in English cloth, cover embossed and printed in two colors. All houses illustrated with halftone cuts on the very finest enamel paper. The illustrations show the houses exactly as they will appear when built, and no liberties have been taken to make them appear otherwise. All the floor plans are shown, giving the size and location of all rooms, closets, porches, etc., so that ideas are given as to both the interior and exterior of these 100 homes. The houses illustrated are medium in price, and such as 80 to 90 per cent of the people of the United States wish to build to-day.

1001 Practical Facts and Figures for Every-Day Life

**A Pocket Manual Containing the Essence of Volumes Arranged and
Systematized for THE BUSY MAN**

"The Busy Man's Friend"

By PROF. J. L. NICHOLS, A. M.

Author of The Business Guide, Household Guide, Search Lights, Farmers' Manual, Safe Citizenship, etc.

AND

H. H. GOODRICH, A. M.

Attorney-at-Law and Master in Chancery

The Following is the TABLE OF CONTENTS, in part, which speaks for itself:

The Hows of Business

Success, How won; Notes, How to write, collect, and transfer; Notes, Safe principles to practice; Notes, Different forms; Notes, How endorsed; Notes, Forms of endorsements; Notes, Receipt for lost; Receipts, How to write; Receipts, Different forms; Orders, How to write; Due Bills, How to write; Checks, How to write and present; Checks, Different forms; Checks, How to endorse; Drafts, Hints and helps on writing; Drafts, Forms; Bill of Exchange; Banks, How to do business with; Papers, How to transfer; Debt, How to demand payment; Change, How to make quickly; Wealth, How to obtain; Money, How to send by mail; etc., etc.

Points of Law and Legal Forms

Affidavits; Agreement for hiring a clerk; Agreement for cultivating lands; Agreement for building a house; Proposal to erect public buildings; Contracts, How to write; Contracts, Law governing; Contracts, Not lawful; Contracts, Vital part; Contracts, Forms; Sale of Property, Law governing; Bill of Sale; Landlord and Tenant; Leases; Leases, Forms; Deeds, How to write; Deeds, Law governing; Deeds, Warranty; Mortgages; Mortgages, Law governing; Mortgages, Forms; Mortgages, Debt; Mortgages, Assignment; Mortgages, Release; Mortgages, Foreclosure; etc., etc.

The Busy Man's Digest of Laws

Presumptions of Law; Criminal Law; Signatures; Law on Lost Notes; Law on Forged

Paper; Legal Gifts; Law on Trading; Exemption Laws; Homestead Laws; Outlawed Debts; Foreign Postage; Newspaper Subscriptions; Laws of the Public Road; Fence Laws; Responsibility in Runaways; Responsibility in Owning a Dog; Parliamentary Rules; Legal Holidays.

Practical Information for Busy Men

Trusts; Corporations; Counterfeit Money; Swindling Schemes, Gambling and Betting; Swindling Note, Various Swindling Exposed; Liability of Railroad and Express Companies; Rights of Married Women; Parents; Civil Service Law; Mines and Miners; Mines, Locating and Notice of Location.

The Busy Man's Digest of Facts

Occupations of People; Population of the World; Cost of Smoking; Painting, Rules, etc. Distances and Railroad Fares from Chicago; Population of Cities of United States.

Computations at Sight

Short Methods of Arithmetic; Tables of Weights and Measures; Miscellaneous Tables; Hints and Helps Concerning Interest; Short Methods of Calculating Interest; Interest Tables; Compound Interest Tables; Carpets, To find number of yards to cover a floor; Paper, Amount required to paper a room; etc., etc.

PRICE, 75 CENTS

TO SAVE TIME IS TO SAVE MONEY

BAUGHMAN'S BUYER AND SELLER

Will do all your calculating and figuring for you better than you can do it, in less than half the time, and WITHOUT MAKING MISTAKES. One little slip in figuring on a single estimate might easily cost you \$50 without being noticed until too late.

This handy book for everybody who handles lumber, from the stump to the finished building, gives accurately the number of feet in any number of pieces from 1 x 1 to 30 x 30 inches, and up to 50 feet long, with tables for every size indexed. Tables of cost for 400 different prices from 1-16 cent up; number of feet of flooring, siding, ceiling, shiplap; number of shingles for any size building; weights of grain; weights of all kinds of lumber; length of rafters and rafter patterns; log scales; postal and interest tables; cipher messages; terms and abbreviations; estimated freight and capacity of freight cars; rules for carpenters, plasterers, painters, paper-hangers and bricklayers. Answers the knotty questions that come up each day, saving time and money. This book is bound in flexible morocco of suitable size for the pocket, and can be supplied for only **\$1.25**.

THE LUMBERMAN'S HANDY COMPANION

Will more than save its cost every month in the year, besides making your work easier and life more enjoyable. What's the use making your work harder than necessary when for **\$1.25** you can remove a large "chunk" of the burden?

Every Lumberman, Builder, Carpenter, Insurance Man, Mechanic, Farmer, etc., should have a copy. Everything is shown in a plain and simple manner. Bound in finest flexible covers. Printed on best of paper. Suitable for the pocket. Handy for the desk. In use in all parts of the United States and Canada.

COMMON-SENSE STAIRBUILDING and HANDRAILING

Illustrated

By FRED T. HODGSON

THIS NEW VOLUME contains three distinct treatises on the subject, each of which is complete in itself. The system of forming the lines for obtaining the various curves, wreaths, ramps and face moulds for handrails are the simplest in use and those employed by the most successful handrailleurs. Mr. Hodgson has placed this unusually intricate subject before his readers in a very plain and easily understood manner, and any workman having a fair knowledge of "lines" and who can construct an ordinary straight stairway can readily grasp the whole system of "handrailing" after a small study of this work.

The building of stairs and properly making and placing over them a graceful handrail and suitable balusters and newel posts is one of the greatest achievements of the joiner's art and skill, yet it is an art that is the least understood of any of the constructive processes the carpenter or joiner is called upon to accomplish. In but very few of the plans made by an architect are the stairs properly laid down or divided off; indeed, most of the stairs as laid out and planned by the architect are impossible ones, owing to the fact that the circumstances that govern the formation of the rail are either not understood or not noticed by the designer, and the expert handrailler often finds it difficult to conform the stairs and rail to the plan. Generally, however, he gets so close to it that the character of the design is seldom changed.

The stairs are the great feature of a building as they are the first object that meets the visitor and claims his attention, and it is essential, therefore, that the stair and its adjuncts should have a neat and graceful appearance, and this can only be accomplished by having the rail properly made and set up.

This little book gives such instructions in the art of handrailing as will enable the young workman to build a rail so that it will assume a handsome appearance when set in place. There are eleven distinct styles of stairs shown, but the same principle that governs the making of the simplest rail, governs the construction of the most difficult, so, once having mastered the simple problems in this system, progress in the art will become easy, and a little study and practice will enable the workman to construct a rail for the most tortuous stairway.

The book is copiously illustrated with nearly one hundred working diagrams together with full descriptive text.

HOW TO FRAME A HOUSE

OR, HOUSE AND ROOF FRAMING

By OWEN B. MAGINNIS.

It is a practical treatise on the latest and best methods of laying out, framing and raising timbers for houses, together with an easily understood system of Roof Framing, the whole making a handy and easily applied book for carpenters, builders, foremen and journeymen.

PART I.—Balloon Framing. PART II.—Roof Framing. PART III.—How to Frame the Timbers of a Brick House. Eighty illustrations. One octavo volume, cloth.

Price, - - - \$1.00

ROOF FRAMING MADE EASY

By OWEN B. MAGINNIS.

A practical and easily comprehended system of laying out and framing roofs, adapted to modern building construction. The methods are made clear and intelligible by seventy-six engravings, with extensive explanatory text. One octavo volume, cloth.

Price, - - - \$1.00

HAND-SAWS

HOW TO SET AND FILE. HOW TO SELECT AND HOW TO USE

By FRED T. HODGSON.

Illustrated by over seventy-five engravings. Being a complete guide for selecting, using and filing all kinds of hand-saws, buck-saws, compass and key-hole saws, web, hack and butchers' saws; showing the shapes, forms, angles, pitches and sizes of saw teeth suitable for all kinds of saws, and for all kinds of wood, bone, ivory and metal; together with Hints and Suggestions on the Choice of Files, Saw-sets, Filing-clamps, etc., and other matters pertaining to the care and management of all classes of hand and other saws.

Price, Cloth, Gilt, - - - \$1.00

This work is intended more particularly for operative carpenters, joiners, cabinet makers, carriage builders and woodworkers generally, amateurs or professionals.

The Practical Stone-Cutter and Mason's Assistant

Being a Collection of Every-day Examples, showing Arches, Retaining Walls, Buttresses, Skew-Arches, Vaults, Domes and Semi-Domes, Quoins, Groins, etc., with Explanations of the most Approved and Economical Methods of working them out; together with a Copious Description of the Tools Used by Stone Cutters, showing Methods of Use, etc., etc. By Fred T. Hodgson. Over 100 Explanatory Illustrations. **Price, paper, 75c**

Bricklaying

By Owen T. Maginnis. The entire work represents the best up-to-date practice, explained by 100 pages text and illustrated by over 150 engravings.

Contents: Part I. Chapter I. Bricklayers' Tools and Their Application. Chapter II. Laying or Setting Out the Work, Measuring and Leveling. Chapter III. Mixing Concretes and Mortars. Chapter IV. Bricklaying and Bonding Straight Walls of Various Thicknesses. Chapter V. Building Brick Angles, Corners and Intersecting Walls. Chapter VI. Laying Bricks in Flemish, Running and Herringbone Bonds: "Front Work." Chapter VII. Brick Arches, Lintels and Piers. Chapter VIII. Brick Chimneys, Flues and Furring Brick Walls. Chapter X. General, Important and Miscellaneous Details of Brickwork.

Part II. "Shoring," "Needling," and "Underpinning." This part covers the important operations and methods necessary in altering brick buildings, and the proper temporary and permanent preservation and protection of old or adjoining buildings.

Price, cloth, by mail, \$2.00

Practical Centring

Treating of the Practice of Centering Arches in Building Construction, as carried on in the United States at the present time; also giving other useful information of value to the trade.

These works embrace each subject in detail, and in language that practical men can understand, and are especially commended to Bricklayers, Masons and Contractors. By Owen T. Maginnis. Sixty-five illustrations. Bound in cloth. **Price, \$1.50**
